

Luxury listing marketing burns hours — and dollars — every week.

Agents still rebuild brochures in Word/Canva: hunt photos, paste MLS facts, fight templates. At Silicon Valley agent time (~\$75–\$150/hr loaded), a 2–4 hour flyer is \$150–\$600 designer invoice. Multiply by listings/month and the “free tool” is the expensive path.

2–4 hrs

per brochure today
(Word / Canva rebuild)

~\$150–\$600

labor cost / listing
(at \$75–\$150/hr)

<\$10 min

URL → edit → PDF
on this HF Space

10x+

time compression
per listing cycle

BEFORE — “Free” tools that aren’t free

- Blank Canva/Word → rebuild brand every listing
- Photo hunting + fact copy-paste + QA loops
- Inconsistent seller materials → weaker listing launch
- Hidden cost: agent hours + opportunity cost of showings not booked

AFTER — URL → branded template → edit → \$\$ saved

- 1 Paste Compass URL (scrape photos + facts)
- 2 Auto-fill luxury template (HF Space, live)
- 3 Human edit only the gaps — not rebuild
- 4 Print/PDF in minutes → more listings/week

Investor line: turn marketing labor into a productized margin — Jason Lim · Compass · DRE #02444964

Watch minutes replace hours. URL in → brochure out.

<https://jasonnlim-listing-brochure-studio-jason-realty.static.hf.space>

- Live Compass URL + RapidAPI key — or Willow Glen demo if quota is tight (still shows the full save)
- Scroll: Hero → stats → gallery → Google Map → agent CTA (Jason Lim brand)
- Edit brochure only where data is thin — then Print/PDF (Background graphics on)
- Constraint: Compass.com RapidAPI only in this build (Zillow/Redfin = separate APIs / future cost)

VC talk track: “We’re not selling hours in Canva. We’re compressing \$150–\$600 of brochure labor into a productized workflow agents can run house.”

Save time now. Expand into a listing OS with observable quality.

Why this is investable

- Clear pain with a \$ figure: brochure labor per listing
- Distribution: every listing appointment is a demo (and a conversion)
- Wedge → expand: brochure packs, AI estimate narrative, team kits
- Trust moat: licensed Compass agent (DRE #02444964)
- Shipped: public HF Space today — not a deck-only story

Expansion architecture (what we build next)

Observe	LangSmith: trace each run — which photos/facts imported, what stayed blank. Debug cost
Analyze	API payload vs brochure output. Completeness score before PDF (catch \$ mistakes early).
Generate	LLM luxury copy polish grounded in facts only — editable, brand-safe.
Distribute	MLS/IDX sync · batch brochures · seller share links · brokerage brand kits (scale the \$ save)

Back-of-envelope (pitch, not audited)

Example: 8 listings/month × 3 hrs saved × \$100/hr ≈ \$2,400/month labor unlocked per active agent — before designer fees or faster time-to-market on the listing. Team/loop multiply that. Productize the workflow; meter API + seats later.
